

CuraMind AI - API Documentation

1. Authentication APIs

➤ **POST /api/auth/register**

Purpose: Register new user

Field	Type	Description
username	string	User name
password	string	User password
role	string	patient/doctor/admin

Response: Success message with user ID

➤ **POST /api/auth/login**

Purpose: Authenticate user

Field	Type	Description
username	string	User name
password	string	User password

Response: JWT Token

➤ **GET /api/auth/profile**

Purpose: Get user profile

Response: User details

2. Appointment APIs

➤ **POST /api/appointments/book**

Purpose: Book appointment

Field	Type	Description
patient_id	int	Patient ID
doctor_id	int	Doctor ID
date	datetime	Appointment time

Response: Appointment confirmation

➤ **GET /api/appointments**

Purpose: Get appointments list

Response: List of appointments

➤ **PUT /api/appointments/{id}**

Purpose: Update appointment Response:

Updated appointment details

3. Medical Record APIs

➤ **POST /api/records/upload**

Purpose: Upload medical image

Field	Type	Description
image	file	Medical image
patient_id	int	Patient ID

Response: Record created, AI processing started

➤ **GET /api/records/{id}**

Purpose: Get record details Response:

Image, AI result, diagnosis

➤ **GET /api/records**

Purpose: Get all records Response:

List of records

➤ **PUT /api/records/{id}/diagnosis**

Purpose: Add diagnosis

Field	Type	Description
diagnosis	string	Doctor diagnosis

Response: Updated record

➤ **GET /api/records/{id}/ai-status**

Purpose: Check AI status Response:

Pending / Completed

CuraMind AI - Enhanced API Documentation

JWT Authentication

All protected APIs require JWT token in header:

```
Authorization: Bearer <access_token>
```

Example Token Response:

```
{
  "access": "jwt_token",
  "refresh": "refresh_token"
}
```

Common Errors:

```
401 Unauthorized:
{
  "error": "Invalid or expired token"
}
```

Authentication APIs

POST /api/auth/register

```
Request:
{
  "username": "john_doe",
  "password": "secure123",
  "role": "patient"
}

Response:
{
  "message": "User registered successfully",
  "user_id": 101
}
```

POST /api/auth/login

```
Request:
{
  "username": "john_doe",
  "password": "secure123"
}

Response:
{
  "access": "jwt_token",
  "refresh": "refresh_token"
}
```

Appointment APIs

POST /api/appointments/book

```
Request:
{
```

```
"patient_id": 1,
"doctor_id": 5,
"date": "2026-04-25T10:00:00"
}

Response:
{
  "message": "Appointment booked",
  "appointment_id": 55
}
```

GET /api/appointments

```
Response:
[
  {
    "id": 55,
    "doctor": "Dr. Sharma",
    "date": "2026-04-25T10:00:00",
    "status": "confirmed"
  }
]
```

Error Example:

```
400 Bad Request:
{
  "error": "Doctor not available at selected time"
}
```

Medical Record APIs

POST /api/records/upload

```
Request (multipart):
image: file
patient_id: 1

Response:
{
  "record_id": 200,
  "status": "Processing started"
}
```

GET /api/records/{id}

```
Response:
{
  "record_id": 200,
  "image_url": "secure_link",
  "ai_result": "Possible infection",
  "diagnosis": null
}
```

PUT /api/records/{id}/diagnosis

```
Request:
{
  "diagnosis": "Mild pneumonia"
}

Response:
{
  "message": "Diagnosis added"
}
```

GET /api/records/{id}/ai-status

Response:

```
{  
  "status": "Completed"  
}
```

Error Example:

403 Forbidden:

```
{  
  "error": "Access denied to this record"  
}
```
